### **Garratt-Callahan's "Formula" for Success Saves a Software Company \$20,000 a Year**

#### **Problem**

At its complex of seven buildings, a large software company had a campus-wide problem: all the buildings were afflicted with a terrible smell. It was pretty clear that the odor was emanating from the grease traps in the kitchens, but the expensive measure of draining and cleaning the traps every week failed to solve the problem. Meanwhile, employees, customers, and other visitors were complaining, and many simply steered clear of the campus.

#### **Solution**

The Garratt-Callahan field representative called to the scene introduced Formula BZ8200-L, the company's industrial strength bio-augmentation product, into all the grease traps. The product worked as it was designed to do, by accelerating the digestion of fats, oils, and grease under either aerobic or anaerobic conditions. The offensive odor vanished from all the buildings almost immediately.

#### **Results**

Everyone on campus started smiling again. The building managers were smiling, too, because they no longer had to spend \$20,000 a year on grease trap maintenance.

#### **Conclusion**

The right solution to a water treatment problem may look simple. But with Garratt-Callahan, that simplicity rests on 100 years of experience in the field and in the lab.

**Garratt-Callahan: Smart water treatment solutions based on a century of experience and expertise.**
